

Vertical mixer is a kind of mixing machine which is widely used in feeding pellet making, the vertical mixer is easy to feeding mesh material and discharge the final mixed material. The mixing evenness is >95%.

To meet different client requirement, we also have mixer and grinder all in one machine, which can grinding and mixing the raw material at same time. The corn, wheat, soyabean feed into the grinder from the feeding pipe, after grinding the mesh powder will go to impeller on the left side from a chute, the other powder raw material will feed from the hopper on right side and go to another impeller, all of the powder material will move to mixing tank by the mixing propeller, finally got mixed in the mixing tank and then discharged from the discharge chute.

Vertical mixer and grinder all in one machine structure

Advantages of vertical mixer:

1. Simple structure, easy to operate and clean
2. High level mixing evenness
3. Short mixing time
4. We can design the mixer with grinder, grinding and mixing all in one machine is more efficiency than grinding and mixing separately.

Vertical mixer technical data:

Model	Mixing motor	Capacity	Mixer tank Φ	Dimension
LJB50	3Kw	500kg/h	950mm	1250x1150x2300mm
LJB100	3Kw	1000kg/h	1000mm	1450x1250x2700mm
LJB150	4Kw	1500kg/h	1250mm	1700x1450x2800mm
LJB200	4Kw	2000kg/h	1500mm	2000x1800x2800mm

Mixer and grinder technical data:

Model	Grinding motor	Mixing motor	Capacity	Mixer tank Φ
FJB50	7.5Kw	3Kw	500kg/h	950mm
FJB100	7.5Kw	3Kw	1000kg/h	1000mm
FJB150	11Kw	4Kw	1500kg/h	1250mm
FJB200	15Kw	4Kw	2000kg/h	1500mm
